

Security Care

The infrastructures can get quite damaged by the salt in the air as we are so close to the ocean as well as the wind and even though we never had anything stolen, to be on the safe side, we take **certain precautions** as:

-**Closing the tools container** (green container) as soon as **we don't use it any more** (at nightfall most of the time or if nobody is at the farm). Also close it if it is raining.

-Making sure the **entrance gate is properly closed** (it means to make sure that guests know how to close it properly and accompany them when they leave if needed).

-**Back door must be closed** in a way that the wind or a person cannot just push it open (you can also move the latch from outside too) but the lock remains unlocked.

-Please remember to **take your keys** and **avoid entering** through the fences/sides of the farm as there are many plants (some spiky and dangerous) and dripping lines installed and we don't want to give bad example to strangers.

-The **gray container** can't be closed because of the electric and internet cable but we **close** it as much as possible **at night** and **if there is rain**.

-Michael&Yasmín are taking care of the blue container that needs to be mice and rats proof.

-**Electric equipment and tools in general need to be safe from rain at all times** (it is good to have a look in the green container for water leaks in case of strong rain).
